

Final Project Overview

Estimated time needed: 2 mins

You will have the opportunity to take your Django skills and implement them in a project. You will receive a boilerplate code for an Online Course app to work with.

Then using the skills you learned in this course, you will plan and implement the improvements in the application; these improvements include:

1. Create Question, Choice, and Submission models
2. Create a new course object with exam related models using the admin site
3. Update the course details template to show questions and choices
4. Create a new exam result template to show the result of the submission
5. Create a new exam result submission view
6. Create a new view to display and evaluate exam result

Evaulation Criteria

You can submit your project deliverables in one of the following ways:

Option 1: AI-Graded Submission and Evaluation

When you choose Option 1, you will be redirected to an AI tool where you can upload your deliverables, which may include URLs, terminal outputs, code snippets, or screenshots. You will then receive an AI-generated grade that will automatically reflect on your Course progress page.

Option 2: Peer-Graded Submission and Evaluation

When you choose Option 2, you will upload your deliverables—such as URLs, terminal outputs, code snippets, or screenshots—through the My Submission section. Your submission will then be reviewed either by your peers or by an AI grader.

We recommend using Option 1 for faster grading. However, if you face any issues or cannot access it, you may use Option 2 instead.

If you encounter any grading problems, please reach out to the Course Team through the Discussion Forums.

Please find the details of the Grading Criteria below:

- Criteria for Option 1: AI Graded Submission and Evaluation
- Criteria for Option 2: Peer Graded Submission and Evaluation
